2) Read data from students.xml file and store them in students table of MySQL.

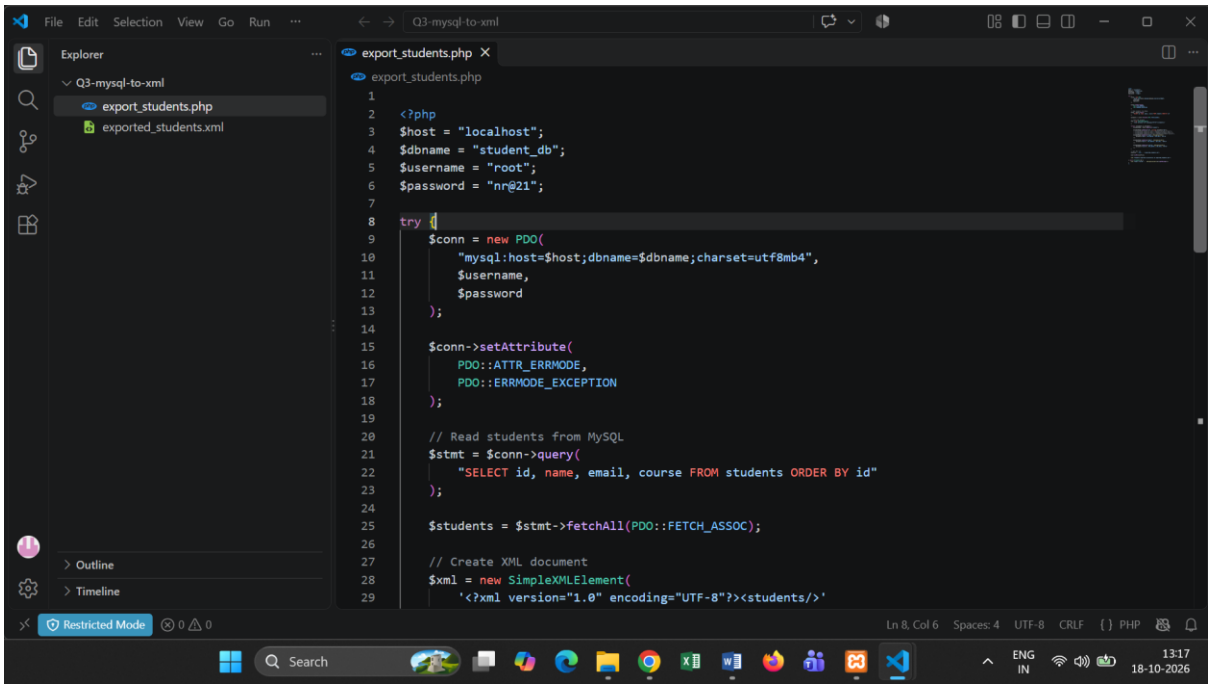

Students.xml

```xml
<?xml version="1.0" encoding="UTF-8"?>
<students>
    <student>
        <id>1</id>
        <name>Rahul Patel</name>
        <email>rahul@example.com</email>
        <course>PHP</course>
    </student>
    <student>
        <id>2</id>
        <name>Priya Shah</name>
        <email>priya@example.com</email>
        <course>Python</course>
    </student>
    <student>
        <id>3</id>
        <name>Amit Desai</name>
        <email>amit@example.com</email>
        <course>Java</course>
    </student>
</students>
```

3) Read data from students table of MySQL and store them in students.xml file.

```php
<?php
$host = "localhost";
$dbname = "student_db";
$username = "root";
$password = "nr@21";

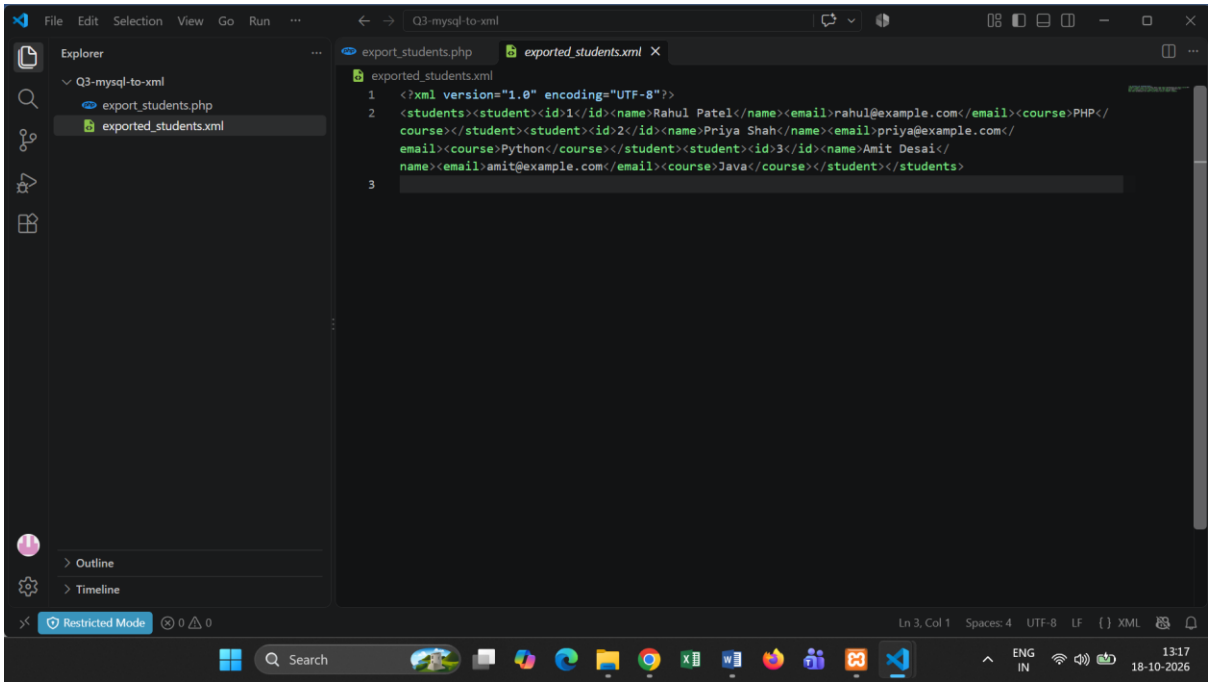

try {
    $conn = new PDO(
        "mysql:host=$host;dbname=$dbname;charset=utf8mb4",
        $username,
        $password
    );

    $conn->setAttribute(
        PDO::ATTR_ERRMODE,
        PDO::ERRMODE_EXCEPTION
    );

    // Read students from MySQL
    $stmt = $conn->query(
        "SELECT id, name, email, course FROM students ORDER BY id"
    );

    $students = $stmt->fetchAll(PDO::FETCH_ASSOC);

    // Create XML document
    $xml = new SimpleXMLElement(
        '<?xml version="1.0" encoding="UTF-8"?><students/>'
```

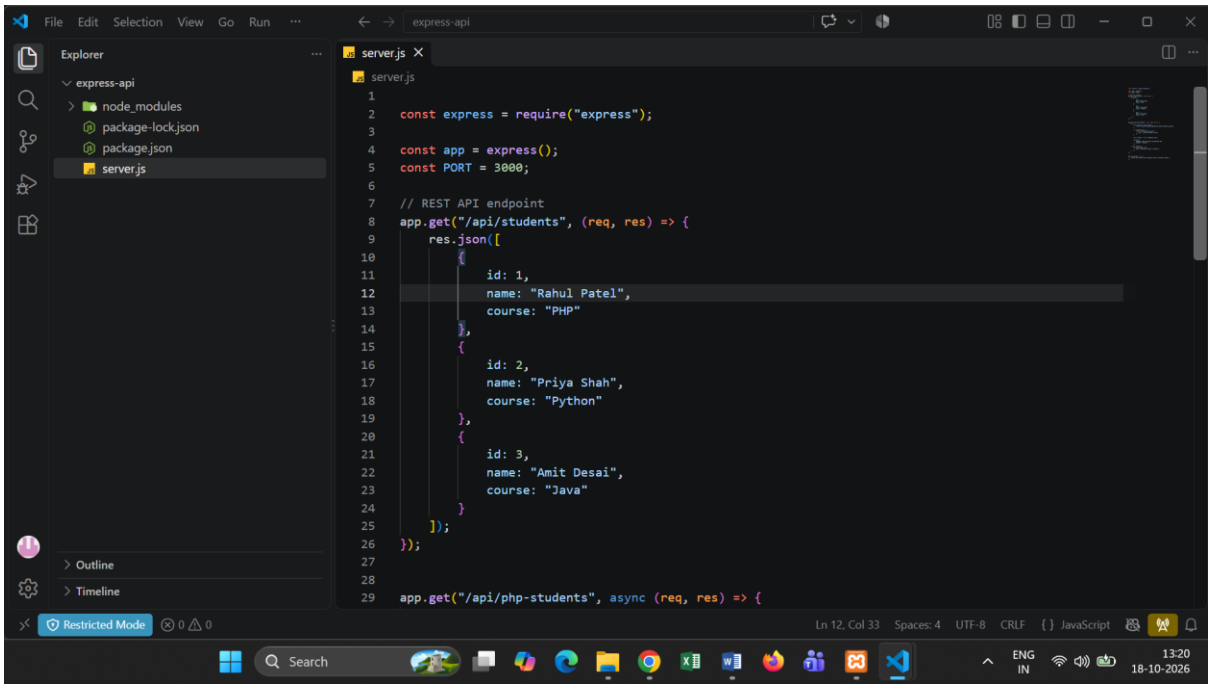

```xml
<?xml version="1.0" encoding="UTF-8"?>
<students><student><id>1</id><name>Rahul Patel</name><email>rahul@example.com</email><course>PHP</course></student><student><id>2</id><name>Priya Shah</name><email>priya@example.com</email><course>Python</course></student><student><id>3</id><name>Amit Desai</name><email>amit@example.com</email><course>Java</course></student></students>
```

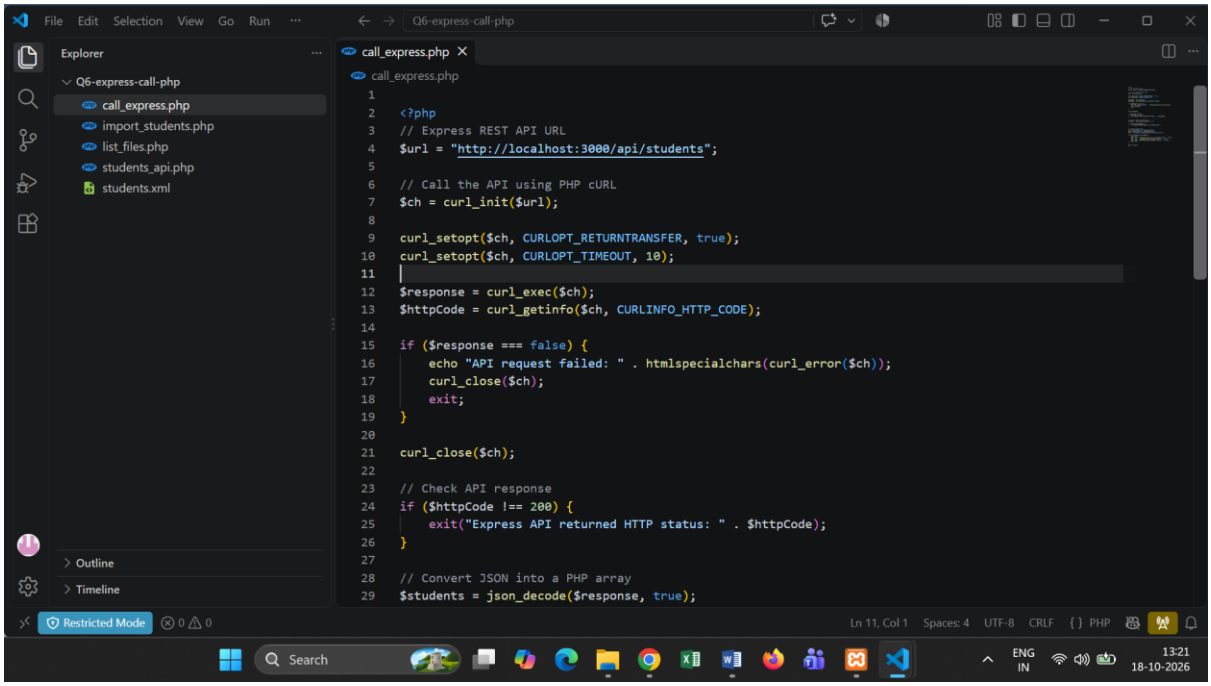

4) List files in a directory.

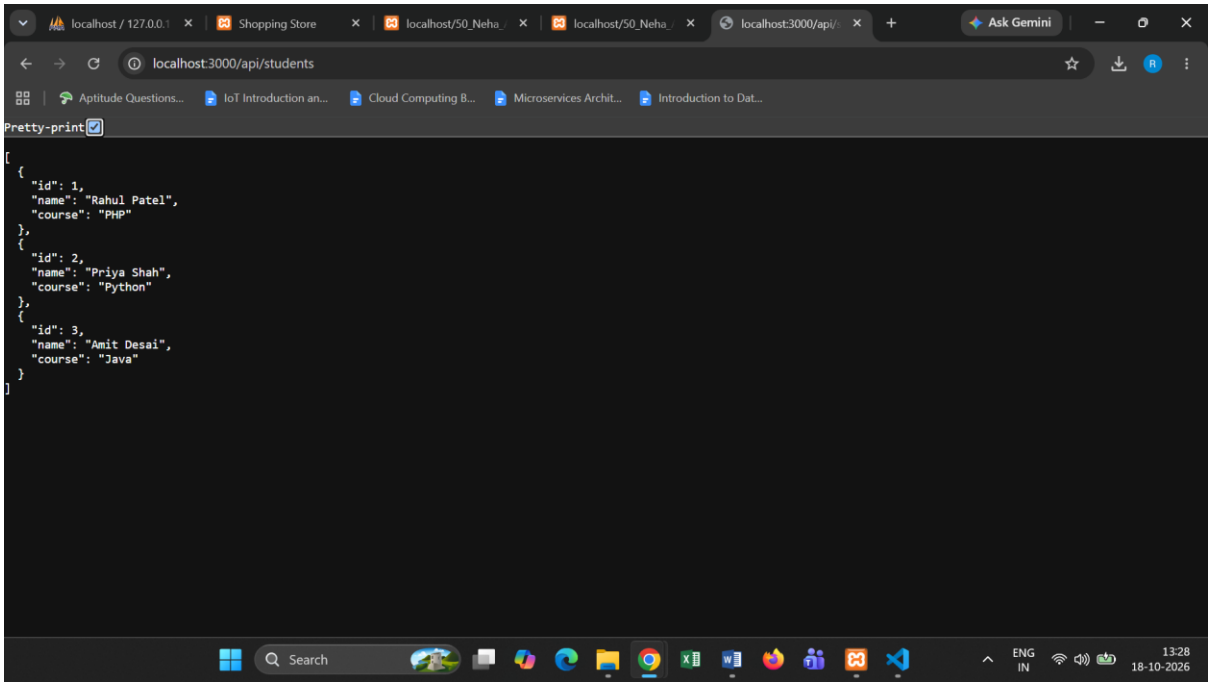

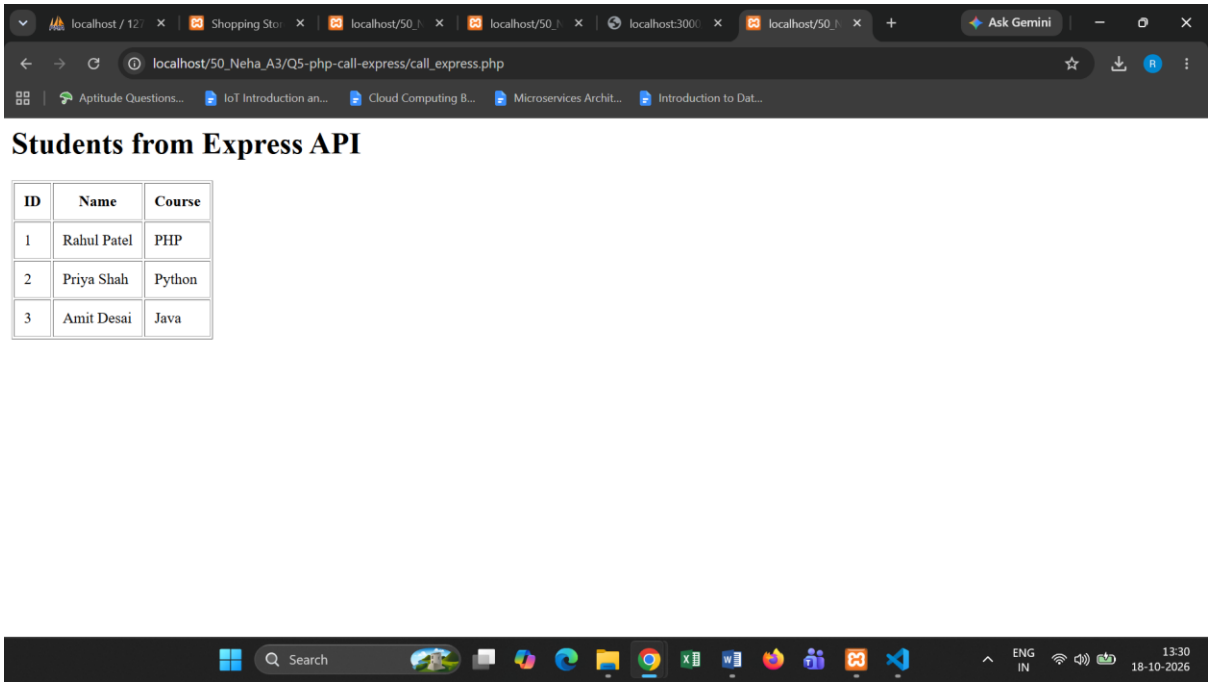

5) Call express rest api in php.

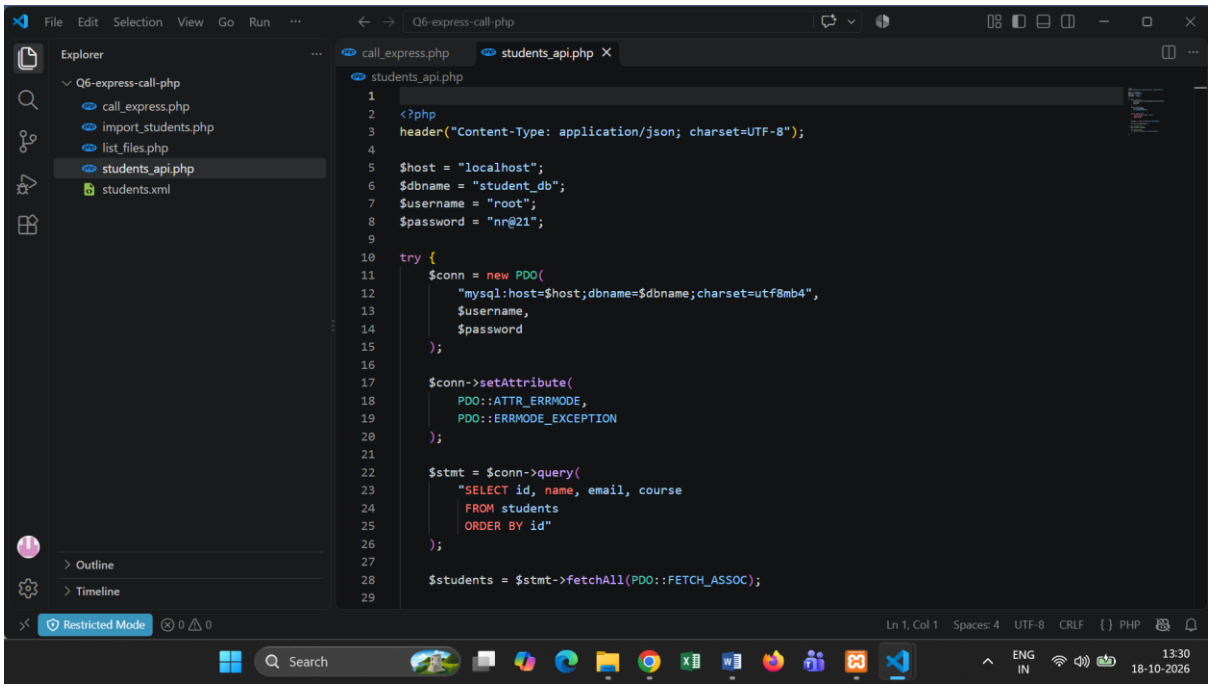

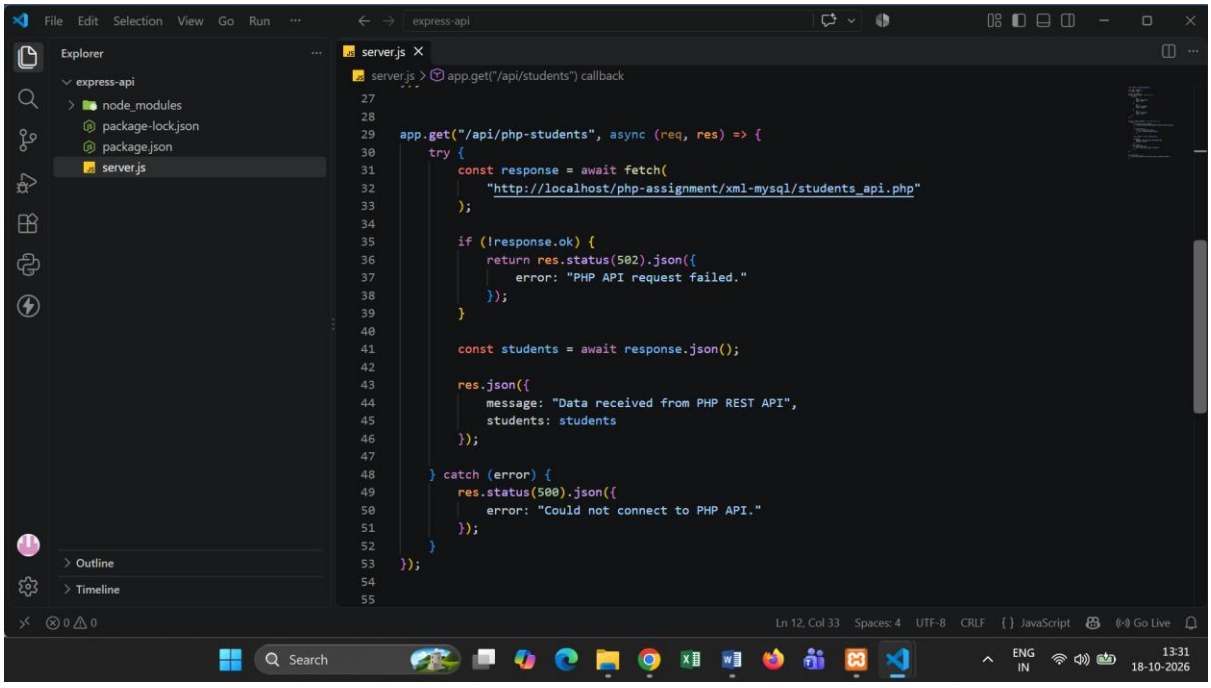

o/p:

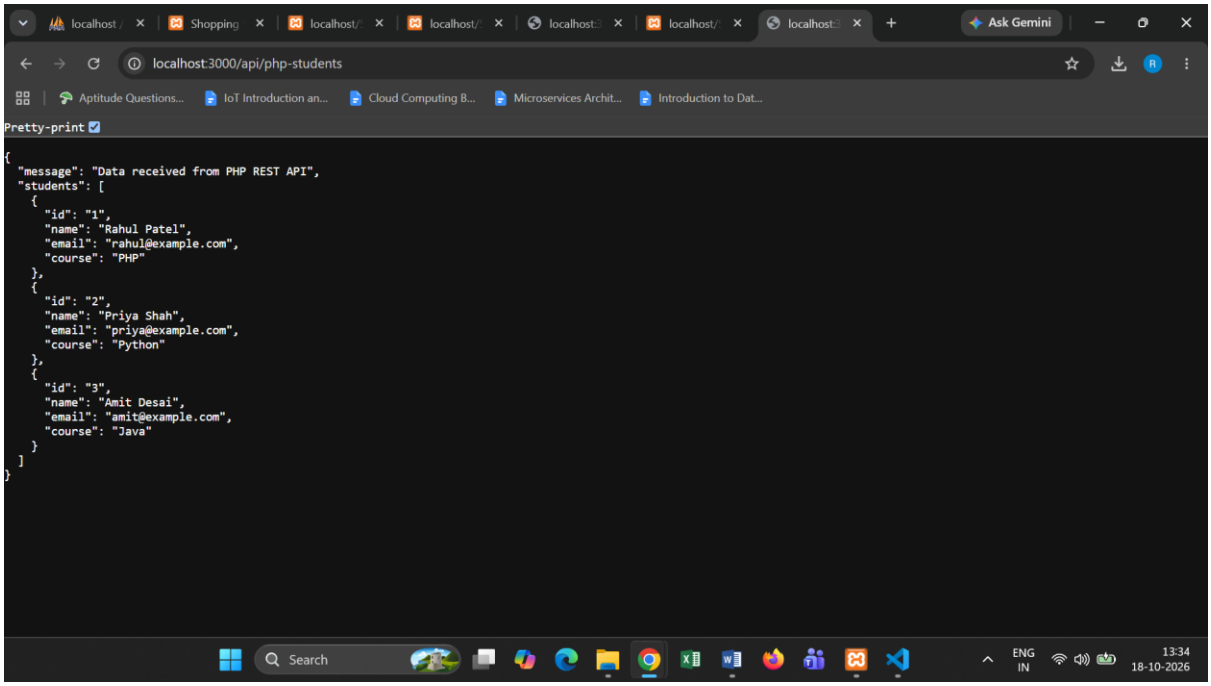

localhost:3000/api/students
Pretty-print
[
{
"id": 1,
"name": "Rahul Patel",
"course": "PHP"
},
{
"id": 2,
"name": "Priya Shah",
"course": "Python"
},
{
"id": 3,
"name": "Amit Desai",
"course": "Java"
}
]

localhost/50_Neha_A3/Q5-php-call-express/call_express.php
Students from Express API
ID
Name
Course
1
Rahul Patel
PHP
2
Priya Shah
Python
3
Amit Desai
Java

6) Call php rest api in express.

localhost:3000/api/php-students
Pretty-print
{
"message": "Data received from PHP REST API",
"students": [
{
"id": "1",
"name": "Rahul Patel",
"email": "rahul@example.com",
"course": "PHP"
},
{
"id": "2",
"name": "Priya Shah",
"email": "priya@example.com",
"course": "Python"
},
{
"id": "3",
"name": "Amit Desai",
"email": "amit@example.com",
"course": "Java"
}
]
}
